## BASIC-ABSTRACT:

The nematic liquid crystal compsn. comprises cpds. (I)-(XXIV). R1=CH3, H, n=0, 2, m=0, 1, R2=2-7C alkyl, alkenyl, R3=2-7C linear alkyl, alkoxy, alkenyloxy, R4, R5=independently 2-7C linear alkyl, A=1,4-phenylene, 1,4-cyclohexylene, X1=CH3, H, X2=H, F.

The super twisted nematic liquid crystal display device comprising the above compsn. is new.

USE/ADVANTAGE - The liquid crystal compsn. exhibits low threshold potential, high speed response and high chemical stability. The device employing the compsn. exhibits high response, high time sharing skill, improved crosstalk phenomena, thereby good driving and displaying characteristics are obtd., as well as high heat resistance and light stability.
